Mail Processing System is a Maven project, and it run on Tomcat.

How to run this project?

Step 1:

When you download successfully and import it into your IDE (I used Eclipse here), you also need to configure a tomcat server.

Step 2: You need to ensure that your excution environment is JAVASE-1.8. **It is very important!**

Step 3:

Add this project on your Tomcat Server.

```

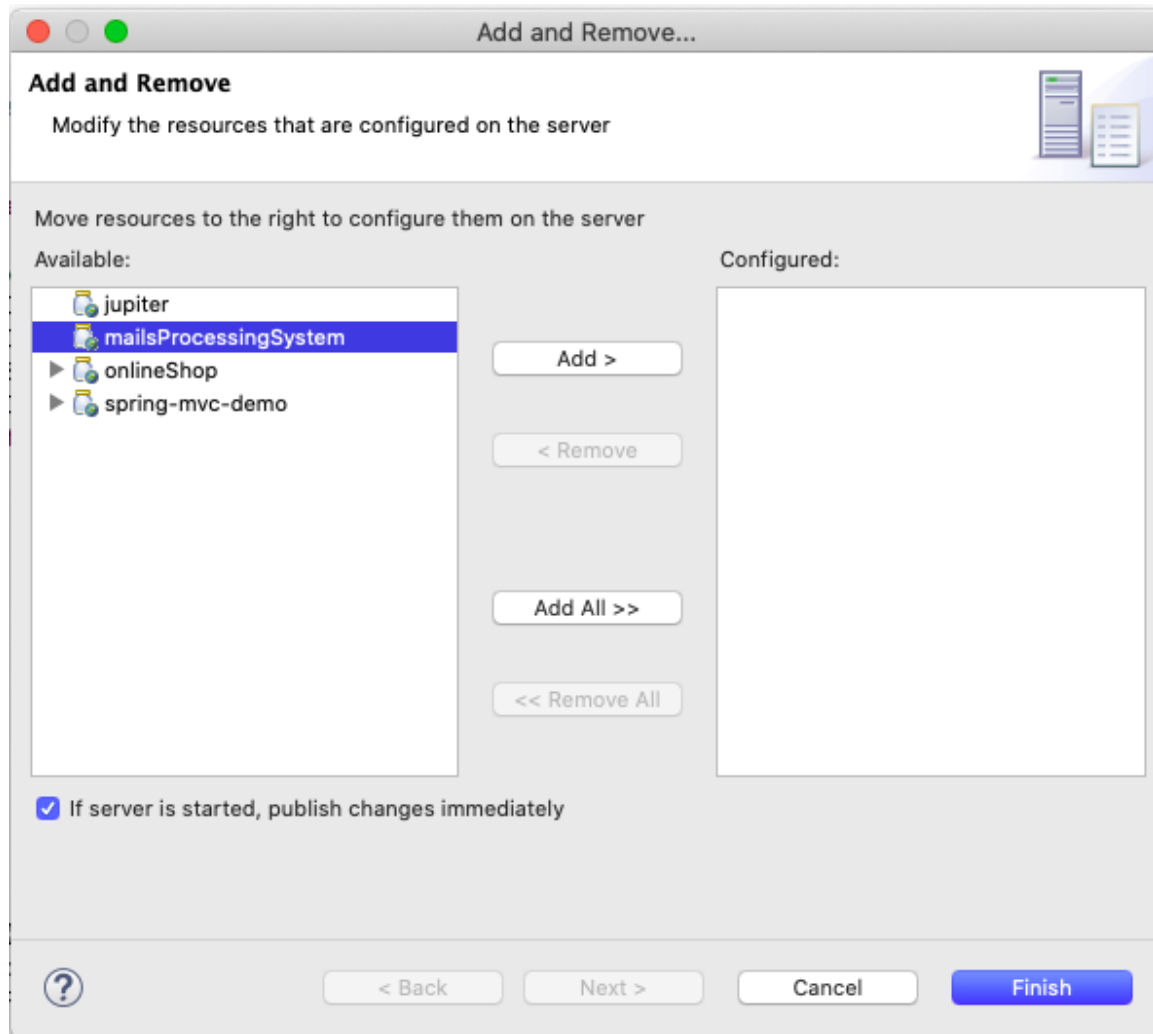

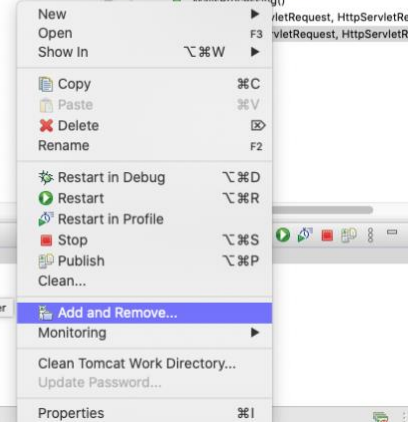

48 Set<String> set = new HashSet<>(); //in order to remove duplicate
49 JSONObject obj = new JSONObject();
50 for (Object j : mailsList) {
51     String s = j.toString();
52     s = s.substring(0, s.length() - 10); // must be gmail (remove "@gmail.com")
53     char[] array = s.toCharArray();
54     StringBuilder sb = new StringBuilder();
55     for (char c : array) { //Logic: 1. Ignore '.'; 2.Ignore the part after "+"
56         if (c == '.') {
57             continue;
58         } else if (c == '+') {
59             break;
60         } else {
61             sb.append(c);
62         }
63     }
64     set.add(sb.toString());
65 }
66 obj.put("number_of_unique_emails", set.size());
67 RpcHelper.writeJsonObject(response, obj);
68 }
69 }
70

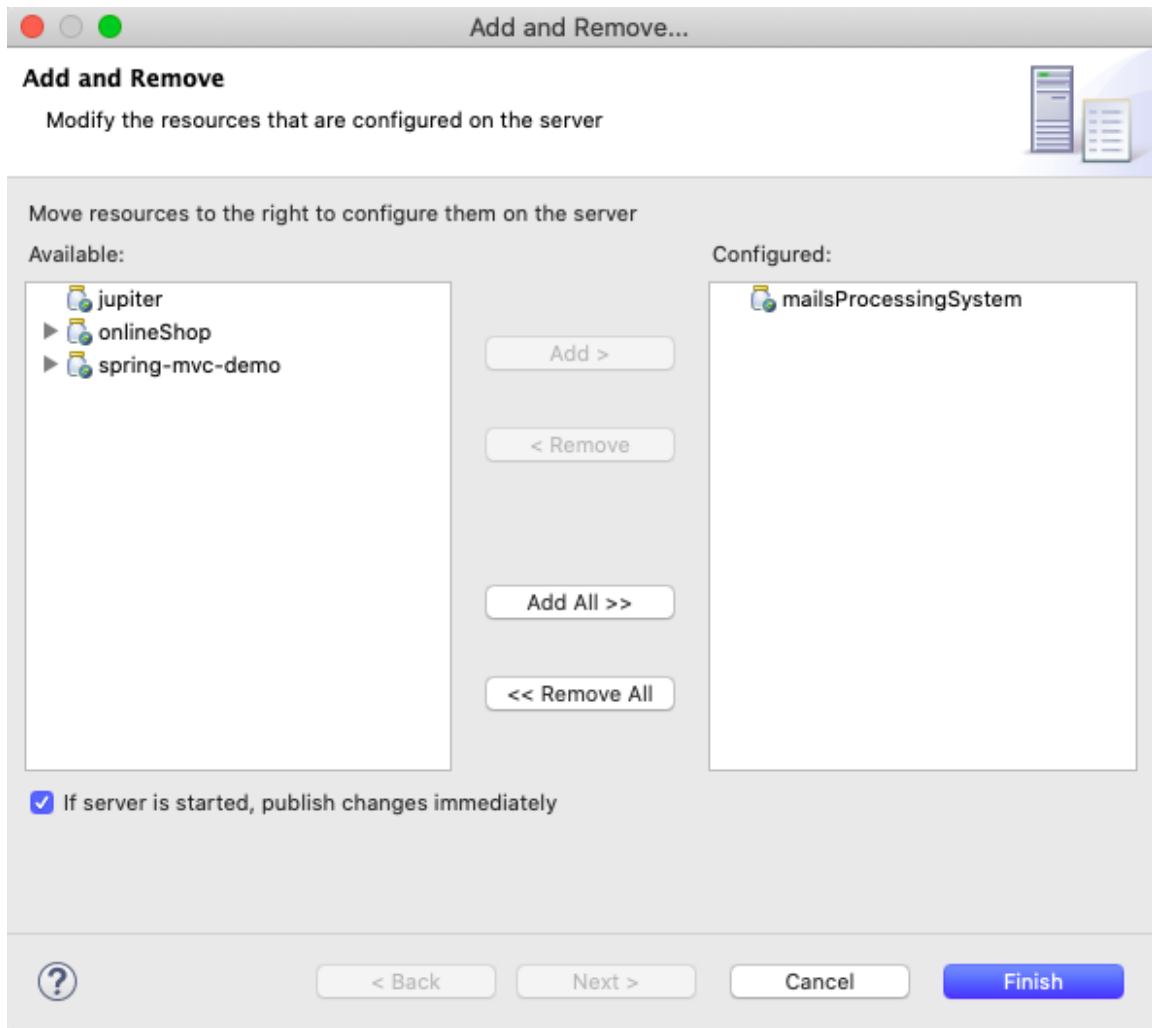

```

Problems Javadoc Declaration Console Servers

Apache Tomcat v9.0 at localhost [Started, Synchronized]

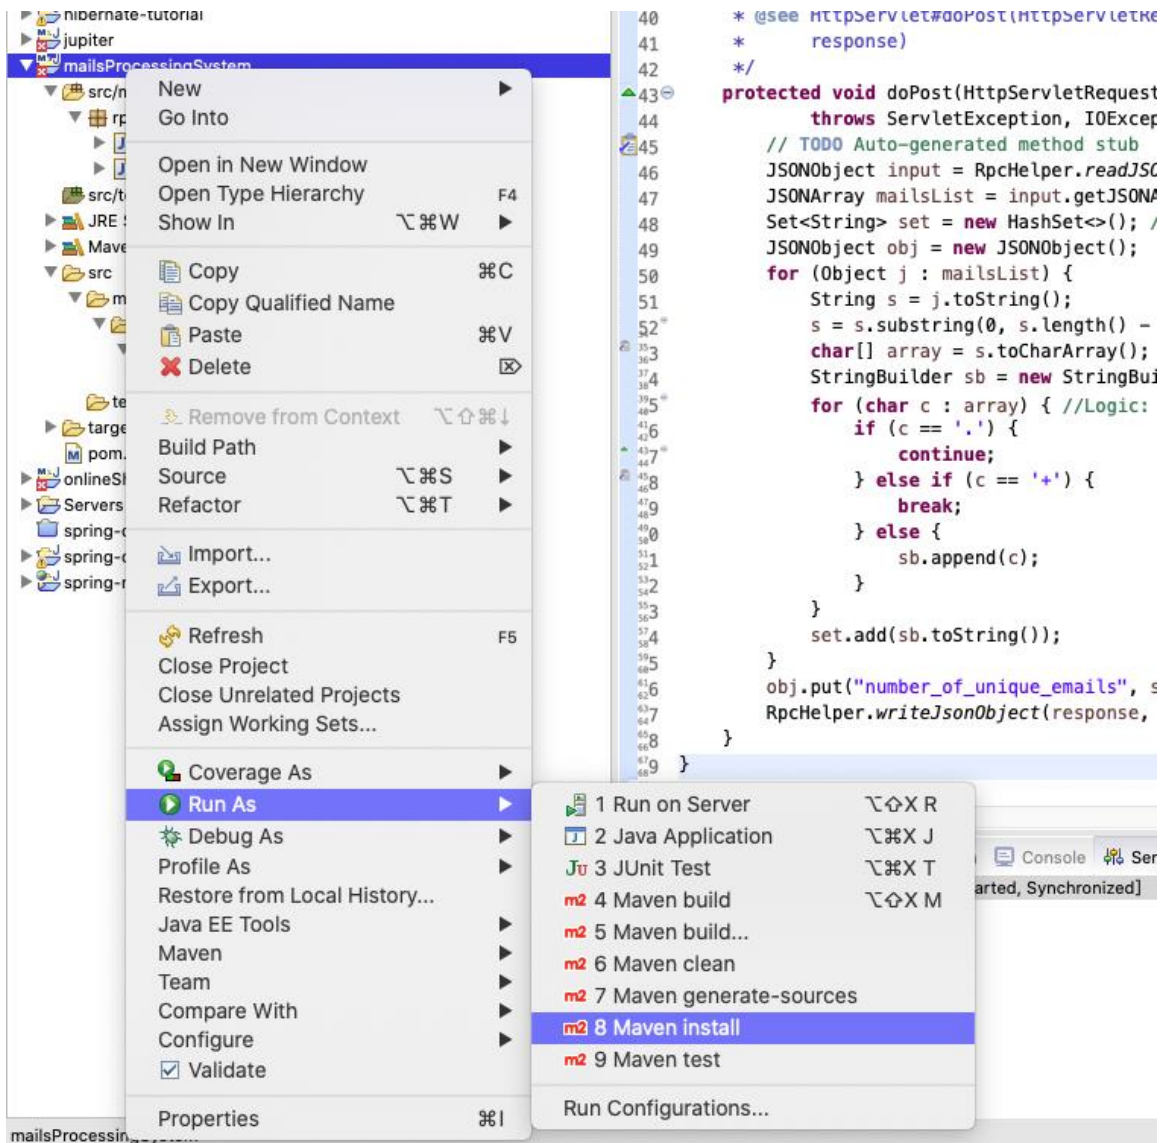

Add and Remove resources to the server

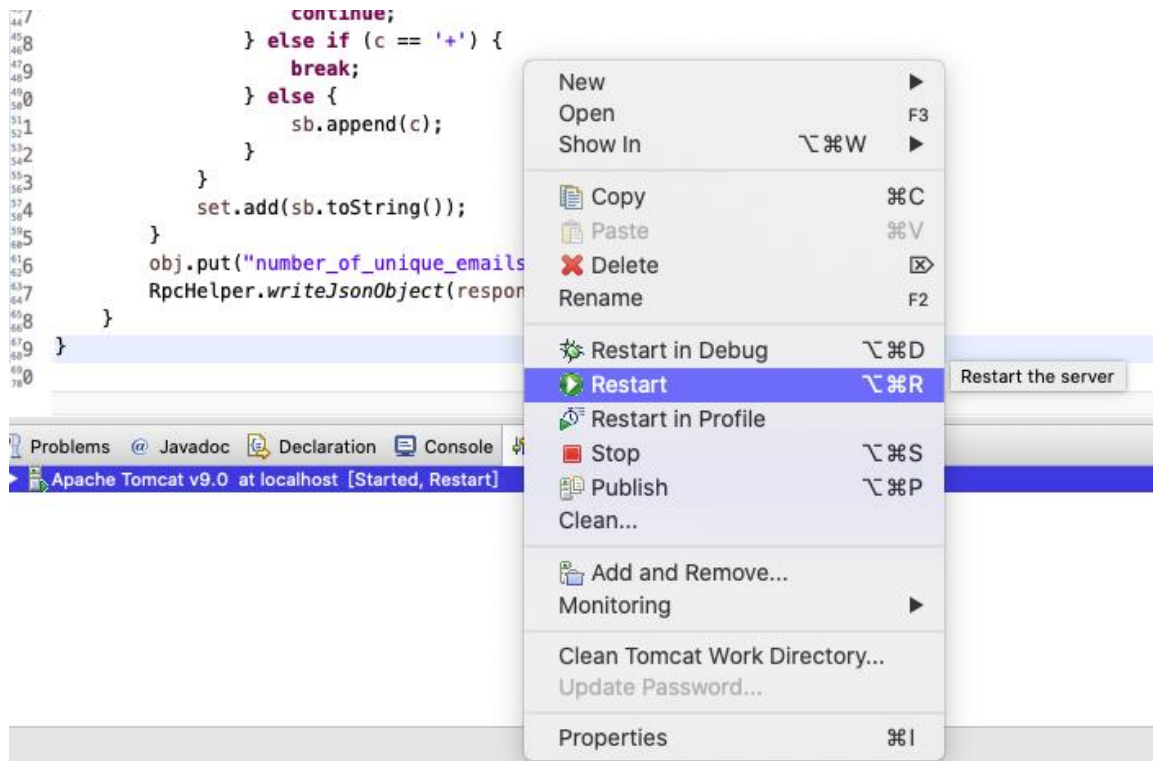

Step 4:

Execute maven install, and after the build success is displayed in the console, restart the tomcat server.

Step 5:

Open your **Postman**:

Use **POST** method: <http://localhost:8080/emailsProcessingSystem/emailsProcessing>

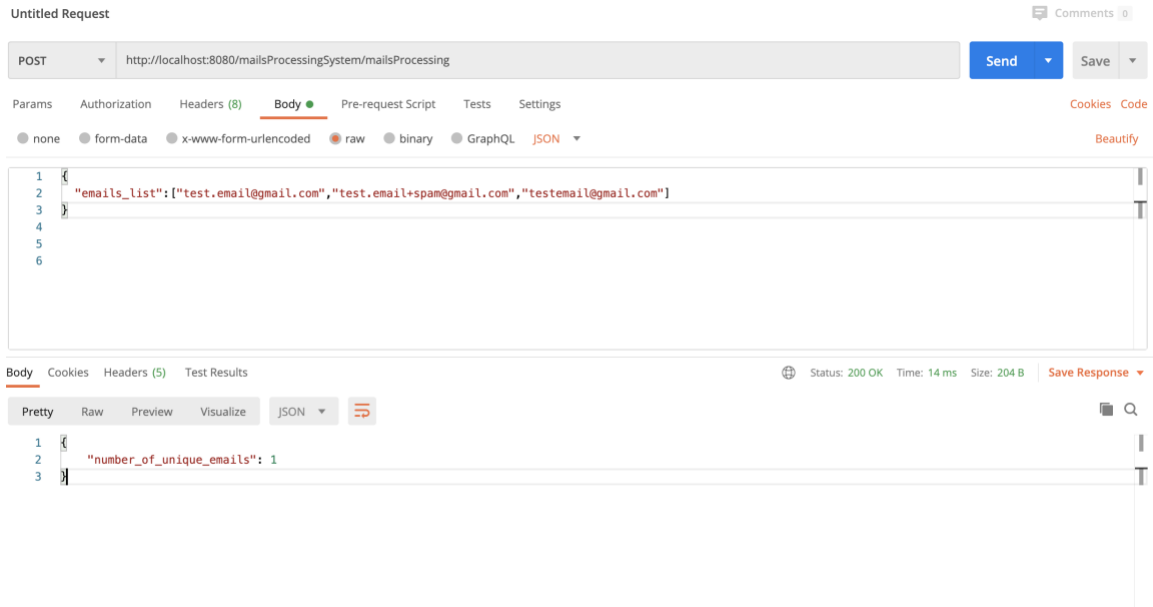

Test:

Request Body 1:

```
{  
  "emails_list": ["test.email@gmail.com", "test.email@fetchrewards.com"]  
}
```

Response Body 1:

```
{  
  "number_of_unique_emails": 2  
}
```

Request Body 2:

```
{  
  
  "emails_list": ["test.email@gmail.com", "test.email+spam@gmail.com", "testemail@gmail.com"]  
  
}
```

Response Body 2:

```
{  
  
  "number_of_unique_emails": 1  
  
}
```
